You must conduct an assessment of your operations to determine the types and volumes of liquids you will most likely use, handle, store, & potentially spill. Then, assess their potential health, safety & environmental risks. Once you have this information, only then can you choose the best materials and equipment for controlling these risks. If you're not sure, we'd be happy to help. Use this form to list all those liquids in your workplace which, if spilled, you are not sure how to handle. Fax the completed form to us and we will offer our advice on the best absorbents and spill response kits to meet your particular situation.

**Fax to 02 4869 3264**

Chemical Product Name	Hazard Class	Typical Amounts Used (L/day)	Typical Amounts Stored (L)	Typical Frequency of Spills	Typical Size of Spills	Comments
